

2024 School Health Profiles

WEIGHTED LEAD HEALTH EDUCATION TEACHER SURVEY RESULTS

The School Health Profiles is a CDC-funded survey of middle and high school principals and lead health education teachers throughout the United States. In Minnesota, The Minnesota Center for Health Statistics administers this survey biennially on a statewide sample of public schools.

Profiles data is used to help state leaders and decision-makers assess gaps in policies and practices that may impact student health and academic performance.

This survey monitors the following areas:

- School health education requirements and content
- Physical education and physical activity
- Practices related to bullying and sexual harassment
- School health policies related to tobacco-use prevention and nutrition
- School-based health services
- Family engagement and community involvement
- School health coordination

In spring 2024, CDC used two questionnaires to collect data—one for school principals and one for lead health education teachers. CDC administered the two questionnaires online to 334 regular public schools containing any of grades 6 through 12 in Minnesota.

CDC received one or both questionnaires from 78% of eligible sampled schools. CDC received usable questionnaires from principals in 75% of schools and from lead health education teachers in 69% of schools.

Questions and more information
